

— VERSION 1.0 — 2026

Brand Guidelines

PREPARED FOR ADIBWAFI.COM — MUHAMAD ADIBWAFI MENAKO, FULL STACK SOFTWARE ENGINEER

A working identity for one person's practice: three years of shipping production systems, and years before that framing shots for a camera. This document sets how the mark, colour,

- 01 Primary Brandmark
- 02 Secondary Brandmark
- 03 Tertiary Brandmark
- 04 Secure Area
- 05 Minimum Size
- 06 Colors
- 07 Incorrect Usage
- 08 Typography

type and supporting graphic of *adibwafi.com* are built and where they stop.

Jakarta, Indonesia — *adibwafi.com*

01

— BRANDMARK / PRIMARY

Primary

Brandmark

Three marks, one hierarchy

The identity is built from three brandmarks of decreasing weight — Primary, Secondary and Tertiary — so the same signature can carry a title slide and a favicon without ever being redrawn. Use the heaviest mark the context can afford.

The **Primary Brandmark** is the full lockup: the AM monogram stacked above the complete name. It is the introduction — the cover of this document, the hero of adibwafi.com, the header of a CV or a proposal.

Construction note — the monogram is one continuous stroke shaped like an M. Where its two diagonals cross the mid-line, a crossbar appears — an A held inside the M's own valley. One line, two initials; hover the mark to see the geometry.

Muhamad Adibwafi Menako

SINGLE-COLOUR, ON OCHRE

02

— BRANDMARK / SECONDARY

Secondary Brandmark

The everyday signature

Monogram plus the domain, set in Manrope rather than the display serif — the lockup is built for small, frequent, functional placements: a site footer, an email signature, a social header, a pull-quote credit line.

The domain wordmark reads in lower case, always — **adibwafi.com** —

matching how it appears in a browser bar.

Never pair the Secondary mark with the full name. If the full name is needed, step up to the Primary lockup instead.

03

— BRANDMARK / TERTIARY

Tertiary Brandmark

Mark only, no name

At icon scale, the name is illegible before it is even read — so the Tertiary mark drops the wordmark entirely and keeps only the monogram. This is what sits in a browser tab, a dock, an avatar circle, or as a quiet watermark in the corner of a project screenshot.

App icon • 512px

Avatar • 64px

Favicon • 16px

Below 24px the crossbar begins to fill in optically — at genuine favicon scale (16px) that is expected and correct; it should read as a solid diamond mass, not as broken hairlines.

04

— CLEARSPACE

Secure Area

One unit, every mark

Clearspace is measured in **u**, the width of a single monogram stroke at whatever size it's used. No text, rule, edge or image may enter that margin — it's what keeps the mark reading as a mark rather than a shape in a crowded layout.

The faint marks in each corner below are the ruler, not decoration — they show the u-unit at that panel's scale.

PRIMARY — 1U ON ALL
SIDES

SECONDARY — 1.5U ON
ALL SIDES

TERTIARY — 0.75U ON
ALL SIDES

05

— LEGIBILITY FLOOR

Minimum Size

Digital-first

adibwafi.com is a screen-native brand — these floors are set for pixels first, with a print equivalent given only where a CV, letterhead or printed card might need one.

Never scale a mark down past its floor and compensate by thickening the stroke — redraw at the target size instead, or drop to the next mark in the hierarchy.

MARK	DIGITAL MINIMUM	PRINT MINIMUM	TYPICAL CONTEXT
Primary lockup	200px wide	45mm wide	Hero, cover, CV header, title slide
Secondary lockup	140px wide	32mm wide	Nav bar, footer, email signature
Tertiary icon	16px wide	8mm wide	Favicon, avatar, watermark

80px

48px

28px

16px – floor

06

— PALETTE

Colors

Two registers

Ochre is the expressive colour — the one warm accent, spent on the mark, on pull-quotes, on the one thing per screen that should catch the eye first.

Slate blue is the technical colour — grids, construction lines, diagrams, code blocks: the engineer's register, used quietly and structurally.

All values below are HEX / RGB. The brand is screen-only, so no CMYK breakdown is

PRIMARY PALETTE

Snow White

COLOUR WAYS

07

— GUARDRAILS

Incorrect Usage

Easy to break, once drawn

The mark is a single deliberate line — most misuse comes from treating it like a generic icon. These are the mistakes that come up first.

Don't recolour the mark outside the defined palette

Don't fill the mark solid — it stays an outlined stroke

Don't rotate or tilt the mark

Don't stretch or distort the proportions

Don't place the mark on a background too close to its own tone

AM

Don't set the wordmark in a generic system serif

Don't add shadows, bevels or gradients

Muhamad Adibwafi Menako

Don't crowd the mark — respect the secure area

08

— SYSTEM

Typography

Three roles, not three moods

Each face has one job. Cormorant Garamond never sets a paragraph; Manrope never sets a headline over four words; JetBrains Mono is reserved for anything that is, functionally, data.

Folio / display	56–112px
Section title (h2)	34–54px
Subhead (h3)	17px
Body	16px / 1.6

DISPLAY — CORMORANT GARAMOND

300 · 400 · 500 · 600 · 700 · italic

Adibwafi Menako

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklm nopqrstuvwxyz 1234567890

Use for cover titles, section headers and pull-quotes only — always above 24px, often italic for a spoken, editorial tone.

UI / BODY — MANROPE

400 · 500 · 600 · 700 · 800

Full Stack Engineer

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklm nopqrstuvwxyz 1234567890

The workhorse — paragraphs, navigation, buttons, form labels. Bold (700–800) carries emphasis; never italic.

SPEC / MONO — JETBRAINS MONO

400 • 500 • 700

#D4A26A • 200px

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklm nopqrstuvwxyz 1234567890

Reserved for hex values, measurements, folio numbers and eyebrow labels — anything that functions like a spec, not prose.

09

— FRAME & GRID

Supergraphic

Two halves of one practice

Before backend systems, there was a camera — the supergraphic keeps both: corner brackets borrowed from a viewfinder, and a faint dot grid borrowed from a codebase's baseline.

Use the pair together, always in the primary two colours — ochre brackets, slate-blue grid. Never brackets alone on a busy photograph; never the grid at full opacity.

Frame

Four open corner brackets, drawn thin, in Taxicab Ochre — the crop marks of a viewfinder, marking an edge without closing a box.

Grid

A faint dot lattice in Radio City Blue at low opacity — a nod to a monospaced editor's baseline grid, felt more than seen.
